Mechanical Engineers**

Two Park Avenue • New York, NY • 10016 USA

Date of Issuance: December 31, 2020

The next edition of this Standard is scheduled for publication in 2022. This Standard will become effective 6 months after the Date of Issuance.

ASME issues written replies to inquiries concerning interpretations of technical aspects of this Standard. Periodically certain actions of the ASME NPPS Committee may be published as Cases. Cases and interpretations are published on the ASME website under the Committee Pages at <http://cstools.asme.org/> as they are issued.

Errata to codes and standards may be posted on the ASME website under the Committee Pages to provide corrections to incorrectly published items, or to correct typographical or grammatical errors in codes and standards. Such errata shall be used on the date posted.

The Committee Pages can be found at <http://cstools.asme.org/>. There is an option available to automatically receive an e-mail notification when errata are posted to a particular code or standard. This option can be found on the appropriate Committee Page after selecting "Errata" in the "Publication Information" section.

ASME is the registered trademark of The American Society of Mechanical Engineers.

This code or standard was developed under procedures accredited as meeting the criteria for American National Standards. The Standards Committee that approved the code or standard was balanced to assure that individuals from competent and concerned interests have had an opportunity to participate. The proposed code or standard was made available for public review and comment that provides an opportunity for additional public input from industry, academia, regulatory agencies, and the public-at-large.

ASME does not "approve," "rate," or "endorse" any item, construction, proprietary device, or activity.

ASME does not take any position with respect to the validity of any patent rights asserted in connection with any items mentioned in this document, and does not undertake to insure anyone utilizing a standard against liability for infringement of any applicable letters patent, nor assume any such liability. Users of a code or standard are expressly advised that determination of the validity of any such patent rights, and the risk of infringement of such rights, is entirely their own responsibility.

Participation by federal agency representative(s) or person(s) affiliated with industry is not to be interpreted as government or industry endorsement of this code or standard.

ASME accepts responsibility for only those interpretations of this document issued in accordance with the established ASME procedures and policies, which precludes the issuance of interpretations by individuals.

No part of this document may be reproduced in any form,
in an electronic retrieval system or otherwise,
without the prior written permission of the publisher.

FOREWORD

In 2011, The American Society of Mechanical Engineers (ASME) established the Committee on Nonmetallic Pressure Piping Systems (NPPS) to develop standards for the construction of nonmetallic pressure piping systems. This Committee's goal was to specify construction¹ requirements for nonmetallic piping and piping products; such requirements were not adequately defined in existing standards.

Prior to the development of the ASME Standards for Nonmetallic Pressure Piping Systems, nonmetallic pressure piping requirements were contained within several existing standards. The nonmetallic piping requirements of the ASME B31 Code for Pressure Piping varied across Sections, with some Sections having no requirements for nonmetallic components at all. Other standards and codes, such as ASME RTP-1 and the ASME Boiler and Pressure Vessel Code (BPVC), Section X, included requirements for reinforced thermoset plastic (RTP) corrosion-resistant equipment but not for piping and piping components. ASME BPVC, Section III did have a few Code Cases that addressed requirements for some nonmetallic piping and piping components, including those made from glass-fiber-reinforced thermosetting resin (FRP) and a few thermoplastics, e.g., high density polyethylene (HDPE) and poly(vinyl chloride) (PVC). However, the scope of these Code Cases was very limited, and in some cases the methodology was nearly 30 years old. The ASME NPPS Standards now serve as a centralized location for NPPS requirements and are developed by committees whose members are experts in this field. The NPPS Committee's functions are to establish requirements related to pressure integrity for the construction of nonmetallic pressure piping systems, and to interpret these requirements when questions arise regarding their intent.

ASME NM.3.3 contains stress tables and physical properties tables for thermoplastic materials as well as data sheets for six reinforced thermoset plastic material constructions. The first edition, ASME NM.3.3-2018, was approved by the American National Standards Institute (ANSI) on August 16, 2018.

ASME NM.3.3-2020 was approved by ANSI on October 29, 2020.

¹ *Construction*, as used in this Foreword, is an all-inclusive term comprising materials, design, fabrication, erection, examination, inspection, testing, and overpressure protection.

ASME NPPS COMMITTEE

Nonmetallic Pressure Piping Systems

(The following is the roster of the Committee at the time of approval of this Standard.)

STANDARDS COMMITTEE OFFICERS

C. Henley, *Chair*
D. McGriff, *Vice Chair*
C. Ramcharran, *Secretary*

STANDARDS COMMITTEE PERSONNEL

R. Appleby, Consultant
D. Burwell, Dudley Burwell Consulting
B. R. Colley, INEOS Composites
R. Davis, Consultant

D. Burwell, *Contributing Member*, Dudley Burwell Consulting
M. Cudahy, *Contributing Member*, Plastic Pipe and Fittings Association
C. Moore, *Contributing Member*, NOV Fiberglass Systems
A. Sakr, *Contributing Member*, Specialist Engineer

SC-NM-2-FRP AND SC-NM-3-NMM SUBGROUP ON MATERIALS

P. K. Gilbert, *Chair*, NOV Fiberglass Systems
G. A. Van Beek, *Vice Chair*, Consultant
M. Beneteau, Owens Corning
D. S. Brown, Interplastic Corp.
J. L. Bustillos, Bustillos and Associates, LLC
B. R. Colley, INEOS Composites
L. J. Craigie, Consultant

R. Davis, Consultant
B. L. Hutton, Lubrizol Advanced Materials
J. Ness, AOC, LLC
D. Olson, Daniel Co.
C. W. Rowley, The Wesley Corp.
K. Wachholder, Sargent and Lundy, LLC
L. E. Hunt, *Contributing Member*, L. E. Hunt and Associates, LLC

SC-THERMO SUBGROUP ON MATERIALS

L. Hutton, *Chair*, Plasticwelding, LLC
J. Leary, *Vice Chair*, Widos, LLC
C. Eastman, Kiewit Power Constructors
L. Gill, Ipex USA, LLC
F. Hampton III, Lubrizol Advanced Materials
J. Kalnins, Plastic-Lined Pipe Solutions

R. Nadel, Charlotte Pipe and Foundry
D. Johnson, *Alternate*, Ipex USA, LLC
D. R. Townley, *Alternate*, Lubrizol Advanced Materials
V. D. Holohan, *Contributing Member*, U.S. Department of Transportation — Pipeline and Hazardous Materials Safety Administration

CORRESPONDENCE WITH THE NPPS COMMITTEE

General. ASME Standards are developed and maintained with the intent to represent the consensus of concerned interests. As such, users of this Standard may interact with the Committee by requesting interpretations, proposing revisions or a case, and attending Committee meetings. Correspondence should be addressed to:

Secretary, NPPS Standards Committee
The American Society of Mechanical Engineers
Two Park Avenue
New York, NY 10016-5990
<http://go.asme.org/Inquiry>

Proposing Revisions. Revisions are made periodically to the Standard to incorporate changes that appear necessary or desirable, as demonstrated by the experience gained from the application of the Standard. Approved revisions will be published periodically.

The Committee welcomes proposals for revisions to this Standard. Such proposals should be as specific as possible, citing the paragraph number(s), the proposed wording, and a detailed description of the reasons for the proposal, including any pertinent documentation.

Proposing a Case. Cases may be issued to provide alternative rules when justified, to permit early implementation of an approved revision when the need is urgent, or to provide rules not covered by existing provisions. Cases are effective immediately upon ASME approval and shall be posted on the ASME Committee web page.

Requests for Cases shall provide a Statement of Need and Background Information. The request should identify the Standard and the paragraph, figure, or table number(s), and be written as a Question and Reply in the same format as existing Cases. Requests for Cases should also indicate the applicable edition(s) of the Standard to which the proposed Case applies.

Interpretations. Upon request, the NPPS Standards Committee will render an interpretation of any requirement of the Standard. Interpretations can only be rendered in response to a written request sent to the Secretary of the NPPS Standards Committee.

Requests for interpretation should preferably be submitted through the online Interpretation Submittal Form. The form is accessible at <http://go.asme.org/InterpretationRequest>. Upon submittal of the form, the Inquirer will receive an automatic e-mail confirming receipt.

If the Inquirer is unable to use the online form, he/she may mail the request to the Secretary of the NPPS Standards Committee at the above address. The request for an interpretation should be clear and unambiguous. It is further recommended that the Inquirer submit his/her request in the following format:

Subject:	Cite the applicable paragraph number(s) and the topic of the inquiry in one or two words.
Edition:	Cite the applicable edition of the Standard for which the interpretation is being requested.
Question:	Phrase the question as a request for an interpretation of a specific requirement suitable for general understanding and use, not as a request for an approval of a proprietary design or situation. Please provide a condensed and precise question, composed in such a way that a "yes" or "no" reply is acceptable.
Proposed Reply(ies):	Provide a proposed reply(ies) in the form of "Yes" or "No," with explanation as needed. If entering replies to more than one question, please number the questions and replies.
Background Information:	Provide the Committee with any background information that will assist the Committee in understanding the inquiry. The Inquirer may also include any plans or drawings that are necessary to explain the question; however, they should not contain proprietary names or information.

Requests that are not in the format described above may be rewritten in the appropriate format by the Committee prior to being answered, which may inadvertently change the intent of the original request.

Moreover, ASME does not act as a consultant for specific engineering problems or for the general application or understanding of the Standard requirements. If, based on the inquiry information submitted, it is the opinion of the Committee that the Inquirer should seek assistance, the inquiry will be returned with the recommendation that such assistance be obtained.

ASME procedures provide for reconsideration of any interpretation when or if additional information that might affect an interpretation is available. Further, persons aggrieved by an interpretation may appeal to the cognizant ASME Committee or Subcommittee. ASME does not “approve,” “certify,” “rate,” or “endorse” any item, construction, proprietary device, or activity.

Attending Committee Meetings. The NPPS Standards Committee regularly holds meetings and/or telephone conferences that are open to the public. Persons wishing to attend any meeting and/or telephone conference should contact the Secretary of the NPPS Standards Committee.

ASMENORMDOC.COM : Click to view the full PDF of ASME NM.3.3 2020

INTRODUCTION

The ASME Standards for Nonmetallic Pressure Piping Systems (NPPS) are as follows:

- NM.1 Thermoplastic Piping Systems: This Standard contains requirements for piping and piping components that are produced using thermoplastic resins or compounds. Thermoplastics are a specific group of nonmetallic materials that, for processing purposes, are capable of being repeatedly softened by increase of temperature and hardened by decrease of temperature.
- NM.2 Glass-Fiber-Reinforced Thermosetting-Resin Piping Systems: This Standard contains requirements for piping and piping components that are produced using glass-fiber reinforcement embedded in or surrounded by cured thermosetting resin.
- NM.3 Nonmetallic Materials: This Standard includes specifications for nonmetallic materials (except wood, nonfibrous glass, and concrete) and, in conformance with the requirements of the individual construction standards, methodologies, design values, limits, and cautions on the use of materials. This Standard is divided into three Parts:
 - NM.3.1, Nonmetallic Materials, Part 1 — Thermoplastic Material Specifications: This Part contains thermoplastic material specifications identical to or similar to those published by the American Society for Testing and Materials (ASTM International) and other recognized national or international organizations.
 - NM.3.2, Nonmetallic Materials, Part 2 — Reinforced Thermoset Plastic Material Specifications: This Part contains reinforced thermoset plastic material specifications identical to or similar to those published by ASTM and other recognized national or international organizations.
 - NM.3.3, Nonmetallic Materials, Part 3 — Properties: This Part provides tables and data sheets for allowable stresses, mechanical properties (e.g., tensile and yield strength), and physical properties (e.g., coefficient of thermal expansion and modulus of elasticity) for nonmetallic materials.

It is the owner's responsibility to select the piping standard that best applies to the proposed piping installation. Factors to be considered by the owner include limitations of the standard, jurisdictional requirements, and the applicability of other standards. All applicable requirements of the selected standard shall be met. For some installations, more than one standard may apply to different parts of the installation. The owner is also responsible for imposing requirements supplementary to those of the standard if such requirements are necessary to ensure safe piping for the proposed installation.

Certain piping within a facility may be subject to other codes and standards, including but not limited to the following:

- ASME B31.1, Power Piping: This code contains requirements for piping typically found in electric power generating stations, industrial and institutional plants, geothermal heating systems, and central and district heating and cooling systems.
- ASME B31.3, Process Piping: This code contains requirements for piping typically found in petroleum refineries; onshore and offshore petroleum and natural gas production facilities; chemical, pharmaceutical, textile, paper, ore-processing, semiconductor, and cryogenic plants; food- and beverage-processing facilities; and related processing plants and terminals.
- ASME B31.4, Pipeline Transportation Systems for Liquids and Slurries: This code contains requirements for piping transporting products that are predominately liquid between plants and terminals, and within terminals and pumping, regulating, and metering stations.
- ASME B31.5, Refrigeration Piping and Heat Transfer Components: This code contains requirements for piping for refrigerants and secondary coolants.
- ASME B31.8, Gas Transmission and Distribution Piping Systems: This code contains requirements for piping transporting products that are predominately gas between sources and terminals, including compressor, regulating, and metering stations; and gas gathering pipelines.

ASME B31.9, Building Services Piping: This code contains requirements for piping typically found in industrial, institutional, commercial, and public buildings, and in multi-unit residences, which does not require the range of sizes, pressures, and temperatures covered in ASME B31.1.

ASME B31.12, Hydrogen Piping and Pipelines: This code contains requirements for piping in gaseous and liquid hydrogen service, and pipelines in gaseous hydrogen service.

National Fuel Gas Code: This code contains requirements for piping for fuel gas from the point of delivery to the connection of each fuel utilization device.

NFPA 99, Health Care Facilities: This standard contains requirements for medical and laboratory gas systems.

NFPA Fire Protection Standards: These standards contain requirements for fire protection systems using water, carbon dioxide, halon, foam, dry chemicals, and wet chemicals.

The ASME NPPS Standards specify engineering requirements deemed necessary for safe design and construction of nonmetallic pressure piping. These Standards contain mandatory requirements, specific prohibitions, and nonmandatory guidance for construction activities. These Standards do not address all aspects of these activities, and those aspects that are not specifically addressed should not be considered prohibited. While safety is the overriding consideration, this factor alone will not necessarily govern the final specifications for any piping installation. With few exceptions, the requirements do not, of practical necessity, reflect the likelihood and consequences of deterioration in service related to specific service fluids or external operating environments. These Standards are not design handbooks. Many decisions that must be made to produce a safe piping installation are not specified in detail within these Standards. These Standards do not serve as substitutes for sound engineering judgment by the owner and the designer. The phrase *engineering judgment* refers to technical judgments made by knowledgeable designers experienced in the application of these Standards. Engineering judgments must be consistent with the philosophy of these Standards, and such judgments must never be used to overrule mandatory requirements or specific prohibitions of these Standards.

To the greatest possible extent, Standard requirements for design are stated in terms of basic design principles and formulas. These are supplemented as necessary with specific requirements to ensure uniform application of principles and to guide selection and application of piping elements. These Standards prohibit designs and practices known to be unsafe and contain warnings where caution, but not prohibition, is warranted.

These Standards generally specify a simplified approach for many of their requirements. A designer may choose to use a more rigorous analysis to develop design and construction requirements. When the designer decides to take this approach, he or she shall provide to the owner details and calculations demonstrating that design, fabrication, examination, inspection, testing, and overpressure protection are consistent with the criteria of these Standards. These details shall be adequate for the owner to verify the validity of the approach and shall be approved by the owner. The details shall be documented in the engineering design.

The designer is responsible for complying with requirements of these Standards and demonstrating compliance with the equations of these Standards when such equations are mandatory. These Standards neither require nor prohibit the use of computers for the design or analysis of components constructed to the requirements of these Standards. However, designers and engineers using computer programs for design or analysis are cautioned that they are responsible for all technical assumptions inherent in the programs they use and for the application of these programs to their design.

These Standards do not fully address tolerances. When dimensions, sizes, or other parameters are not specified with tolerances, the values of these parameters are considered nominal, and allowable tolerances or local variances may be considered acceptable when based on engineering judgment and standard practices as determined by the designer.

Suggested requirements of good practice are provided for the care and inspection of in-service nonmetallic pressure piping systems only as an aid to owners and their inspectors.

The requirements of these Standards are not to be interpreted as approving, recommending, or endorsing any proprietary or specific design or as limiting in any way the manufacturer's freedom to choose any method of design or any form of construction that conforms to the requirements of these Standards.

It is intended that editions of the ASME NPPS Standards not be retroactive. Unless agreement is specifically made between contracting parties to use another edition, or the regulatory body having jurisdiction imposes the use of another edition, the latest edition issued at least 6 months prior to the original contract date for the first phase of activity covering a piping installation shall be the governing document for all design, materials, fabrication, erection, examination, inspection, testing, and overpressure protection for the piping until the completion of the work and initial operation. Revisions to material specifications included in ASME NM.3.1 and ASME NM.3.2 are originated by ASTM and other recognized national or international organizations, and are usually adopted by ASME. However, those revisions do not necessarily indicate that materials produced to earlier editions of specifications are no longer suitable for ASME construction. Both ASME NM.3.1 and ASME NM.3.2 include a Mandatory Appendix, "Guideline on Acceptable ASTM Editions," that lists the

latest edition of material specifications adopted by ASME as well as other editions considered by ASME to be identical for ASME construction.

Users of these Standards are cautioned against making use of revisions to these Standards without assurance that they are acceptable to the proper authorities in the jurisdiction where the piping is to be installed.

ASME NM.3.3-2020

SUMMARY OF CHANGES

Following approval by the ASME NPPS Committee and ASME, and after public review, ASME NM.3.3-2020 was approved by the American National Standards Institute on October 29, 2020.

ASME NM.3.3-2020 includes the following changes identified by a margin note, **(20)**.

<i>Page</i>	<i>Location</i>	<i>Change</i>
4	Table 1-1-1	(1) Entries for PEX and Polyamide-12 and Notes C02 and M25 through M31 added (2) General Note (b) revised

SUBPART 1

STRESS TABLES

STATEMENT OF POLICY ON INFORMATION PROVIDED IN THE STRESS TABLES

The purpose of this Statement of Policy is to clarify which information in the stress tables is mandatory and which is not. The information and restrictions provided in the Notes found throughout the various stress tables provided in this Subpart are mandatory. It is vital to recognize that lines of information in [Tables 1-1-1, 1-1-2, and 1-1-3](#) ([Tables 1-1-1M, 1-1-2M, and 1-1-3M](#)) frequently have essential information referenced in the Notes column. These Notes are organized as follows:

(a) *General Notes.* These notes are applicable to all materials presented in the specific table.

(b) *MX — Material Notes.* These notes are applicable to materials of a specific material nominal composition (e.g., polyethylene), product form (e.g., extruded pipe), and/or type/grade (e.g., PE4710).

(c) *CX — Construction Standard Notes.* These notes are applicable to requirements for a specific construction standard (e.g., ASME NM.1).

The specifications and grades or types, coupled with the assigned Notes for each line, provide the complete description of material in the context of the allowable stresses or allowable stress ranges. Additional requirements for particular types of construction must also be obtained from the requirements governing the construction.

In [Tables 1-1-1, 1-1-2, and 1-1-3](#) ([Tables 1-1-1M, 1-1-2M, and 1-1-3M](#)), the information in the nominal composition column is nonmandatory and is for information only. However, these nominal compositions are the primary sorting used in these tables.

Where provided, the information in the columns for product form, specification number, type/grade, size/thickness, and external pressure chart number is manda-

tory. The information in the material grouping column is also mandatory; however, the primary source for this information is ASME BPVC, Section IX, Table QF-422. When there is a conflict between the material grouping information in these stress tables and that in ASME BPVC, Section IX, the numbers in Section IX shall govern.

The information in the minimum tensile strength and minimum yield strength columns is nonmandatory. These values, as well as the temperature-dependent values provided in [Table 1-1-Y](#) ([Table 1-1-YM](#)) may be invoked by the construction standard in the determination of some form of allowable stress values (e.g., a short-duration load) but do not typically form the basis for long-term allowable stress values for nonmetallic materials. When there is a conflict between the tensile and yield strength values in the stress tables and those in the material specifications in ASME NM.3.1 and ASME NM.3.2, the values in ASME NM.3.1 and ASME NM.3.2 shall govern.

The information in the applicability and maximum temperature limits columns is mandatory. Different construction standards often have different use-temperature limits for the same material and condition. Where a material is permitted for use in the construction code or standard, and is in the SI units version of these tables, the maximum use-temperature limit in these columns is critical. Further, in the SI units version of the stress tables, values may be listed in the table at temperatures above the maximum use-temperature limit. These stress values are provided solely to permit interpolation to be used to determine the allowable stress or allowable stress range at temperatures between the next lowest temperature for which stress values are listed and the maximum use-temperature limit listed in these columns.

GUIDELINE ON LOCATING MATERIALS IN STRESS TABLES, AND IN TABLES OF MECHANICAL AND PHYSICAL PROPERTIES

1 INTRODUCTION

The goal of this Guideline is to assist the users of ASME NM.3.3 in locating materials in the thermoplastic stress tables, tables of thermoplastic mechanical properties, tables of thermoplastic physical properties, and thermoset data sheets. This Guideline defines the logic used to place materials within these tables.

Tables and data sheets whose designators have a prefix of “1-” or “2-” can be found in [Subpart 1](#) or [Subpart 2](#), respectively. Stress tables and mechanical property tables have prefixes of “1-1-,” data sheets have prefixes of “1-2-,” and physical property tables have prefixes of “2-.” The suffix “M” indicates that SI units (metric) are used.

2 STRESS TABLES

Tables 1-1-1 and 1-1-2 (Tables 1-1-1M and 1-1-2M) cover allowable stresses, while Table 1-1-3 (Table 1-1-3M) covers allowable stress ranges. Although [Subpart 1](#) also covers (where applicable based on material type) yield strength, the organization of those mechanical property tables is discussed separately in [section 3](#). A table-by-table explanation of the materials-organization logic used to place materials within the designated tables follows.

2.1 Table 1-1-1 (Table 1-1-1M)

Table 1-1-1 (Table 1-1-1M) provides allowable stresses for thermoplastic¹ materials used in ASME NM.1 construction. Within this table, the first step in ordering materials is to use their nominal compositions. These nominal compositions are nothing more than widely recognized designators for each thermoplastic material. These nominal compositions are arranged as follows:

- (a) chlorinated poly(vinyl chlorides) (CPVCs)
- (b) polyamides (PAs)
- (c) polyethylenes (PEs)
- (d) polyethylenes of raised temperatures (PE-RTs)
- (e) poly(vinyl chlorides) (PVCs)

¹ ASME uses the current ASTM definition of *thermoplastic* — a plastic that repeatedly can be softened by heating and hardened by cooling through a temperature range characteristic of the plastic, and that in the softened state can be shaped by flow into articles by molding or extrusion.

(f) poly(vinylidene fluorides) (PVDFs)

For a given nominal composition, this table is arranged by increasing yield strength. For a given nominal composition and yield strength, stress listings are provided in order of increasing specification number.

Sometimes, for a given nominal composition, yield strength, specification number, and grade or type, there may be more than one line of stresses. At this point, the Notes referenced will define why there are two or more lines of stresses and when each applies.

2.2 Table 1-1-2 (Table 1-1-2M)

Table 1-1-2 (Table 1-1-2M) provides allowable compressive stresses for thermoplastic materials used in ASME NM.1 construction. This table is organized in the same manner as Table 1-1-1 (Table 1-1-1M); see [para. 2.1](#).

2.3 Table 1-1-3 (Table 1-1-3M)

Table 1-1-3 (Table 1-1-3M) provides allowable secondary stress ranges for thermoplastic materials used in ASME NM.1 construction. This table is organized in the same manner as the preceding tables; see [para. 2.1](#).

3 MECHANICAL PROPERTY TABLES

Yield strength values (where applicable based on material type) are to be used in design calculations according to the requirements of the construction standards. However, they are not to be construed as minimum strength values at temperature. This is explained in the General Notes to these tables. [Paragraph 3.1](#) explains the materials-organization logic.

3.1 Table 1-1-Y (Table 1-1-YM)

Table 1-1-Y (Table 1-1-YM) provides yield strength values for thermoplastic materials. The ordering of yield strength lines parallels the logic described for thermoplastic materials in [para. 2.1](#). It is important to note that yield strength typically does not form the basis for long-term allowable stress values for thermoplastic materials; values of yield strength should therefore only be used in design where allowed by the construction standard.

4 PHYSICAL PROPERTY TABLES

Physical properties (thermal conductivity, thermal diffusivity, thermal expansion, and density), modulus of elasticity, and Poisson's ratio values are presented in the tables in [Subpart 2](#) and are based on nominal composition (e.g., polyethylene), product form (e.g., extruded pipe), and/or type/grade (e.g., PE4710). [Paragraphs 4.1 through 4.4](#) describe how these tables are organized.

4.1 Table 2-1 (Table 2-1M)

[Table 2-1 \(Table 2-1M\)](#) covers thermal expansion behavior, presented in terms of *A* (instantaneous coefficient of thermal expansion), *B* (mean coefficient of thermal expansion), and *C* (linear thermal expansion). It covers numerous individual thermoplastic materials and thermoplastic material groupings (as applicable). Notes at the end of the table list the materials covered by the designated groupings. Groupings may be by nominal composition (e.g., polyethylene), product form (e.g., extruded pipe), and/or type/grade (e.g., PE4710), as applicable.

4.2 Table 2-2 (Table 2-2M)

[Table 2-2 \(Table 2-2M\)](#) provides both thermal conductivity (TC) and thermal diffusivity (TD) values. It covers numerous individual thermoplastic materials and thermoplastic material groupings (as applicable). Notes at the end of the table list the materials covered by the designated groupings. Groupings may be by nominal composition (e.g., polyethylene), product form (e.g., extruded pipe), and/or type/grade (e.g., PE4710), as applicable.

4.3 Table 2-3 (Table 2-3M)

[Table 2-3 \(Table 2-3M\)](#) provides moduli of elasticity for materials. For some materials, moduli of elasticity may vary significantly with stress and/or load duration, in addition to temperature; for such materials, moduli of elasticity values are provided in terms of stress and/or load duration, in addition to temperature. The table covers numerous individual thermoplastic materials and thermoplastic material groupings (as applicable). Notes at the end of the table list the materials covered by the designated groupings. Groupings may be by nominal composition (e.g., polyethylene), product form (e.g., extruded pipe), and/or type/grade (e.g., PE4710), as applicable.

4.4 Table 2-4 (Table 2-4M)

[Table 2-4 \(Table 2-4M\)](#) provides Poisson's ratio and density for thermoplastic materials.

5 THERMOSET DATA SHEETS

Allowable stress values, mechanical properties, and physical properties required for all constructions are provided in data sheets. Data sheets are provided for the following thermoset² constructions:

- (a) Type I unsaturated polyester resin [[Table 1-2.1-1 \(Table 1-2.1-1M\)](#)]
- (b) Type II unsaturated polyester resin [[Table 1-2.1-2 \(Table 1-2.1-2M\)](#)]
- (c) 55-deg wind angle unsaturated polyester resin (Type III) [[Table 1-2.1-3 \(Table 1-2.1-3M\)](#)]
- (d) Type I vinyl ester resin [[Table 1-2.2-1 \(Table 1-2.2-1M\)](#)]
- (e) Type II vinyl ester resin [[Table 1-2.2-2 \(Table 1-2.2-2M\)](#)]
- (f) 55-deg wind angle vinyl ester resin (Type III) [[Table 1-2.2-3 \(Table 1-2.2-3M\)](#)]

6 REFERENCES

Plastic definitions and abbreviations used in this Standard are taken from ASTM D883, Standard Terminology Relating to Plastics, and ASTM D1600, Standard Terminology for Abbreviated Terms Relating to Plastics, respectively.

² ASME uses the current ASTM definition of *thermoset* — a plastic that, after having been cured by heat or other means, is substantially infusible and insoluble.

Table 1-1-1 Maximum Allowable Stress Values, *S*, for Thermoplastic Materials (Cont'd)**GENERAL NOTES:**

- (a) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (b) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).

NOTE: (1) Multiply ksi by 1,000 to obtain psi.

CONSTRUCTION CODE NOTES (ASME NM.1):

- C01 Compounding ingredients may vary between material manufacturers for the same grade of CPVC or PVC. While these different ingredients do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.
- C02 Cross-linking method may vary between material manufacturers for the same grade of PEX. While these different methods do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.

DESIGN FACTOR NOTES (ASME NM.1):

- D01 The allowable stress values are based on the hydrostatic design basis (HDB) as determined in accordance with ASTM D2837 multiplied by a design factor (DF) of 0.40.
- D02 The allowable stress values are based on the hydrostatic design basis (HDB) as determined in accordance with ASTM D2837 multiplied by a design factor (DF) of 0.50.
- D03 The allowable stress values are based on the hydrostatic design basis (HDB) as determined in accordance with ASTM D2837 multiplied by a design factor (DF) of 1.0. These values are only to be used when the DF is incorporated in the construction code equations.
- D04 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.32.
- D05 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.40.
- D06 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.50.
- D07 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.63.
- D08 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 1.0. These values are only to be used when the DF is incorporated in the construction code equations.

MATERIAL NOTES:**M01 Material shall have a**

- (a) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 360,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 212°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,000 psi at 180°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 500 psi at 180°F in accordance with ASTM D2837

M02 Material shall have a

- (a) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 360,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 212°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,250 psi at 180°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 625 psi at 180°F in accordance with ASTM D2837

M03 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3, in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 2,500 psi at 73°F, 1,600 psi at 140°F, and 1,250 psi at 180°F in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,250 psi at 73°F, 800 psi at 140°F, and 625 psi at 180°F in accordance with ASTM D2837.

Table 1-1-1 Maximum Allowable Stress Values, S, for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

M04 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 3,150 psi at 73°F and 1,600 psi at 180°F in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837.

M05 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer.

M06 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M07 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 630 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M08 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, or colored with UV stabilizer.

M09 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 100 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M10 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 100 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M11 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M12 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M13 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M14 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603.

M15 Material shall have a

- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638

Table 1-1-1 Maximum Allowable Stress Values, S, for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837
- M16** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,500 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,250 psi at 73°F in accordance with ASTM D2837
- M17** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 3,200 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,600 psi at 73°F in accordance with ASTM D2837
- M18** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F in accordance with ASTM D2837
- M19** Material shall have a
- (a) minimum impact resistance of 0.65 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 400,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 158°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F in accordance with ASTM D2837
- M20** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 7,100 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 3,550 psi at 73°F in accordance with ASTM D2837
- M21** Allowable stress values apply to the unoriented directions only.
- M22** Allowable stress values apply to the oriented direction only.
- M23** Material shall have a
- (a) classification of Type I in accordance with ASME SD-3222
 - (b) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (c) minimum flexural modulus of 190,000 psi at 73°F in accordance with ASTM D790, using Method I
 - (d) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 2 in./min at 73°F
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,250 psi at 200°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 625 psi at 200°F in accordance with ASTM D2837
- M24** Material shall have a
- (a) classification of Type II in accordance with ASME SD-3222
 - (b) minimum flexural modulus of 190,000 psi at 73°F in accordance with ASTM D790, using Method I
 - (c) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 2 in./min at 73°F
 - (d) hydrostatic design basis (HDB) of 5,000 psi at 73°F and 1,250 psi at 248°F in accordance with ASTM D2837
 - (e) hydrostatic design stress (HDS) of 2,500 psi at 73°F and 625 psi at 248°F in accordance with ASTM D2837
- M25** The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.
- M26** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer. The degree of cross-linking for PEX pipe material shall be within the range from 65% to 89%, inclusive.
- (a) PEX cross-linked using peroxides shall have a minimum degree of cross-linking of 70%.
 - (b) PEX cross-linked using silane compounds shall have a minimum degree of cross-linking of 65%.
 - (c) PEX cross-linked using electron beam compounds shall have a minimum degree of cross-linking of 65%.
- M27** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 630 psi at 200°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 625 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M28** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.

Table 1-1-1 Maximum Allowable Stress Values, *S*, for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (b) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 625 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M29 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 630 psi at 200°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M30 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M31 Material shall have a

- (a) classification of Group 4, Class 2, and Grade 3 in accordance with ASTM D6779.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 3,150 psi at 73°F and 1,600 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (g) hydrostatic design stress (HDS) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

Table 1-1-2 Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)

GENERAL NOTES:

- (a) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (b) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).

NOTE: (1) Multiply ksi by 1,000 to obtain psi.

CONSTRUCTION CODE NOTES (ASME NM.1):

- C01 Compounding ingredients may vary between material manufacturers for the same grade of CPVC or PVC. While these different ingredients do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.
- C02 Cross-linking method may vary between material manufacturers for the same grade of PEX. While these different methods do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.

MATERIAL NOTES:

M01 Material shall have a

- (a) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 360,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 212°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,000 psi at 180°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 500 psi at 180°F in accordance with ASTM D2837

M02 Material shall have a

- (a) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 360,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 212°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,250 psi at 180°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 625 psi at 180°F in accordance with ASTM D2837

M03 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm $\pm$ 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min $\pm$ 10% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm $\times$ 12.7 mm $\times$ 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min $\pm$ 50% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 2,500 psi at 73°F, 1,600 psi at 140°F, and 1,250 psi at 180°F in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,250 psi at 73°F, 800 psi at 140°F, and 625 psi at 180°F in accordance with ASTM D2837.

M04 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm $\pm$ 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min $\pm$ 10% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm $\times$ 12.7 mm $\times$ 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min $\pm$ 50% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 3,150 psi at 73°F and 1,600 psi at 180°F in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837.

M05 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer.

M06 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350
- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
- (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air

Table 1-1-2 Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (e) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M07** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 630 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M08** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, or colored with UV stabilizer.
- M09** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 100 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M10** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 100 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M11** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M12** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M13** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M14** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603.
- M15** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837
- M16** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,500 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,250 psi at 73°F in accordance with ASTM D2837
- M17** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 3,200 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,600 psi at 73°F in accordance with ASTM D2837

Table 1-1-2 Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)

MATERIAL NOTES: (Cont'd)

M18 Material shall have a

- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F in accordance with ASTM D2837

M19 Material shall have a

- (a) minimum impact resistance of 0.65 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 400,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 158°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F in accordance with ASTM D2837

M20 Material shall have a

- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 7,100 psi at 73°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 3,550 psi at 73°F in accordance with ASTM D2837

M21 Allowable stress values apply to the unoriented directions only.

M22 Allowable stress values apply to the oriented direction only.

M23 Material shall have a

- (a) classification of Type I in accordance with ASME SD-3222
- (b) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (c) minimum flexural modulus of 190,000 psi at 73°F in accordance with ASTM D790, using Method I
- (d) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 2 in./min at 73°F
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,250 psi at 200°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 625 psi at 200°F in accordance with ASTM D2837

M24 Material shall have a

- (a) classification of Type II in accordance with ASME SD-3222
- (b) minimum flexural modulus of 190,000 psi at 73°F in accordance with ASTM D790, using Method I
- (c) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 2 in./min at 73°F
- (d) hydrostatic design basis (HDB) of 5,000 psi at 73°F and 1,250 psi at 248°F in accordance with ASTM D2837
- (e) hydrostatic design stress (HDS) of 2,500 psi at 73°F and 625 psi at 248°F in accordance with ASTM D2837

M25 The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.

M26 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer. The degree of cross-linking for PEX pipe material shall be within the range from 65% to 89%, inclusive.

- (a) PEX cross-linked using peroxides shall have a minimum degree of cross-linking of 70%.
- (b) PEX cross-linked using silane compounds shall have a minimum degree of cross-linking of 65%.
- (c) PEX cross-linked using electron beam compounds shall have a minimum degree of cross-linking of 65%.

M27 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 630 psi at 200°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 625 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M28 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 625 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M29 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 630 psi at 200°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M30 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M31 Material shall have a

- (a) classification of Group 4, Class 2, and Grade 3 in accordance with ASTM D6779.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.

Table 1-1-2 Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)

MATERIAL NOTES: (Cont'd)

(d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.

(e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.

(f) hydrostatic design basis (HDB) of 3,150 psi at 73°F and 1,600 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

(g) hydrostatic design stress (HDS) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

Table 1-1-3 Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)

GENERAL NOTES:

- (a) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (b) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).

NOTE: (1) Multiply ksi by 1,000 to obtain psi.

CONSTRUCTION CODE NOTES (ASME NM.1):

- C01 Compounding ingredients may vary between material manufacturers for the same grade of CPVC or PVC. While these different ingredients do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.
- C02 Cross-linking method may vary between material manufacturers for the same grade of PEX. While these different methods do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.

DESIGN FACTOR NOTE (ASME NM.1):

- D01 Allowable stress range values are based on a design factor (DF) of 0.50.

MATERIAL NOTES:

M01 Material shall have a

- (a) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 360,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 212°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,000 psi at 180°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 500 psi at 180°F in accordance with ASTM D2837

M02 Material shall have a

- (a) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 360,000 psi at 73°F in accordance with ASTM D638
- (c) minimum deflection temperature under load of 212°F at a load of 264 psi in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,250 psi at 180°F in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 625 psi at 180°F in accordance with ASTM D2837

M03 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 2,500 psi at 73°F, 1,600 psi at 140°F, and 1,250 psi at 180°F in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,250 psi at 73°F, 800 psi at 140°F, and 625 psi at 180°F in accordance with ASTM D2837.

M04 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 3,150 psi at 73°F and 1,600 psi at 180°F in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837.

M05 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer.

M06 Material shall have a

- (a) thermal stability of over 428°F in accordance with ASTM D3350

Table 1-1-3 Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M07** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 630 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M08** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, or colored with UV stabilizer.
- M09** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 100 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M10** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 100 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M11** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M12** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 1,000 psi at 140°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M13** Material shall have a
- (a) thermal stability of over 428°F in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -76°F in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 2 in./min at 73°F
 - (d) slow crack growth resistance of over 500 hr in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M14** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603.
- M15** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 73°F in accordance with ASTM D2837
- M16** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,500 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,250 psi at 73°F in accordance with ASTM D2837
- M17** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648

Table 1-1-3 Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 3,200 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,600 psi at 73°F in accordance with ASTM D2837
- M18** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F in accordance with ASTM D2837
- M19** Material shall have a
- (a) minimum impact resistance of 0.65 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 400,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 158°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F in accordance with ASTM D2837
- M20** Material shall have a
- (a) minimum impact resistance of 5.0 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 320,000 psi at 73°F in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 140°F at a load of 264 psi in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 sec in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 7,100 psi at 73°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 3,550 psi at 73°F in accordance with ASTM D2837
- M21** Allowable stress values apply to both the oriented and unoriented directions.
- M22** Material shall have a
- (a) classification of Type I in accordance with ASME SD-3222
 - (b) minimum impact resistance of 1.5 ft-lb/in. of notch at 73°F in accordance with ASTM D256
 - (c) minimum flexural modulus of 190,000 psi at 73°F in accordance with ASTM D790, using Method I
 - (d) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 2 in./min at 73°F
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 73°F and 1,250 psi at 200°F in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 73°F and 625 psi at 200°F in accordance with ASTM D2837
- M23** Material shall have a
- (a) classification of Type II in accordance with ASME SD-3222
 - (b) minimum flexural modulus of 190,000 psi at 73°F in accordance with ASTM D790, using Method I
 - (c) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 2 in./min at 73°F
 - (d) hydrostatic design basis (HDB) of 5,000 psi at 73°F and 1,250 psi at 248°F in accordance with ASTM D2837
 - (e) hydrostatic design stress (HDS) of 2,500 psi at 73°F and 625 psi at 248°F in accordance with ASTM D2837
- M24** The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.
- M25** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer. The degree of cross-linking for PEX pipe material shall be within the range from 65% to 89%, inclusive.
- (a) PEX cross-linked using peroxides shall have a minimum degree of cross-linking of 70%.
 - (b) PEX cross-linked using silane compounds shall have a minimum degree of cross-linking of 65%.
 - (c) PEX cross-linked using electron beam compounds shall have a minimum degree of cross-linking of 65%.
- M26** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 630 psi at 200°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 625 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M27** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,250 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 625 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M28** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 630 psi at 200°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M29** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 800 psi at 73°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M30** Material shall have a
- (a) classification of Group 4, Class 2, and Grade 3 in accordance with ASTM D6779.
 - (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C and 50% ± 5% relative humidity.
 - (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.

Table 1-1-3 Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)

MATERIAL NOTES: (Cont'd)

(d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.

(e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.

(f) hydrostatic design basis (HDB) of 3,150 psi at 73°F and 1,600 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

(g) hydrostatic design stress (HDS) of 1,600 psi at 73°F and 800 psi at 180°F in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

Table 1-1-Y Yield Strength Values, S_y , for Thermoplastic Materials (Cont'd)**GENERAL NOTES:**

- (a) The tabulated values of yield strength are those that the Committee believes are suitable for use in design calculations. At temperatures above room temperature, the yield strength values correspond to the yield strength trend curve adjusted to the minimum specified room-temperature yield strength. The yield strength values do not correspond exactly to "minimum" or "average" as these terms are applied to a statistical treatment of a homogeneous set of data. Neither the ASME material specifications nor the rules of ASME NM.1 require elevated temperature testing for yield strengths of production material for use in Code components. It is not intended that results of such tests, if performed, be compared with these tabulated yield strength values for ASME Code acceptance/rejection purposes for materials. If some elevated temperature test results on production material appear lower than the tabulated values by a large amount (more than the typical variability of material and suggesting the possibility of some error), further investigation by retest or other means should be considered.
- (b) Notes limiting applications of these materials appear in [Tables 1-1-1, 1-1-2, and 1-1-3](#).
- (c) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (d) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).
- (e) Chlorinated poly(vinyl chloride), polyamide, polyethylene, poly(vinyl chloride), and poly(vinylidene fluoride) are viscoelastic materials. The stress values in this Table are based on short-duration loads and are not appropriate for use as design stresses for long-term sustained loads.

NOTE: (1) Multiply ksi by 1,000 to obtain psi.

MATERIAL NOTES:

- M01 The stress values for chlorinated poly(vinyl chloride) and poly(vinyl chloride) in this Table are based on tensile testing in accordance with ASTM D638 using a Type I tensile bar at 0.20 in./min at 73°F. At other strain rates, other values may apply.
- M02 The stress values for polyamide in this Table are based on tensile testing in accordance with ASTM D638, using a 3.2 mm $\pm$ 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min $\pm$ 10% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity. At other strain rates, other values may apply.
- M03 The stress values for polyethylene in this Table are based on tensile testing in accordance with ASTM D638 using a Type IV tensile bar at 2 in./min at 73°F. At other strain rates, other values may apply.
- M04 These stress values for oriented poly(vinyl chloride) apply to the unoriented directions only.
- M05 These stress values for oriented poly(vinyl chloride) apply to the oriented direction only.
- M06 The stress values for poly(vinylidene fluoride) in this Table are based on tensile testing in accordance with ASTM D638 using a Type I tensile bar at 2 in./min at 73°F. At other strain rates, other values may apply.
- M07 The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.
- M08 The stress values for PEX in this Table are based in tensile testing in accordance with ASTM D638 using Type IV tensile bar at 2 in./min at 73°F. At other strain rates, other values may apply.
- M09 The stress values for Polyamide-12 in this Table are based in tensile testing at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity in accordance with ISO 527 on Type 1A specimens with a strain rate of 50 mm/min. At other strain rates, other values may apply.

Table 1-2.1.1-1 Data Sheet for Fiberglass Unsaturated Polyester Resin Type I (SC-582)

Description and Service Limits		Modulus of Elasticity for Total Wall Thickness, in. (Including 0.1-in. Liner), and Temperature, °F														
Reinforcement material:	Fiberglass (Type E or ECR glass)															
Resin material:	Unsaturated polyester resin

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The maximum allowable design stress value shall be 1,800 psi for flanges constructed of Type I laminates.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 in., it is permissible to use the modulus values applicable to a total wall thickness of 0.80 in. and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

Allowable Stress Envelope

(a) The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.

- (c) The maximum allowable design stress value shall be 3,000 psi for flanges constructed of Type II laminates.

(1) Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.

- (2) For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 in., it is permissible to use the modulus values applicable to a total wall thickness of 0.80 in. and over.
- (3) Elastic properties may also be determined in accordance with ASME NM-2, Mandatory Appendix II.
- (4) Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The Type III laminate values are based on 60% to 65% glass content; slight variations on thermal expansion can be expected if the glass content of the laminate is greater than 65%.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 in., it is permissible to use the modulus values applicable to a total wall thickness of 0.80 in. and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

Allowable Stress Envelope

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The maximum allowable design stress value shall be 1,800 psi for flanges constructed of Type I laminates.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 in., it is permissible to use the modulus values applicable to a total wall thickness of 0.80 in. and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The maximum allowable design stress value shall be 3,000 psi for flanges constructed of Type II laminates.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 in., it is permissible to use the modulus values applicable to a total wall thickness of 0.80 in. and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

Ultimate Stress Data [Notes (4) and (5)]

(a) The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.

- NOTES:

- (2) For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 in., it is permissible to use the modulus values applicable to a total wall thickness of 0.80 in. and over.
- (3) Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.

- (4) Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

Table 1-2.2-3 Data Sheet for Vinyl Ester Resin Type III (55-deg Filament Wound; ASME NM.2, Mandatory Appendix IV) (Cont'd)

NOTES: (Cont'd)

- (5) The ultimate axial tensile strength of 9,600 psi, if tested per ASTM D638, may not be achieved. The value defined is based on experience with testing pipe per ASTM D2105; however, ASTM D2105 testing is not practical for all pipe sizes due to the load required to break the pipe exceeding the capacity of many tensile testing machines. If the purchaser requires testing per NM.2, Mandatory Appendix IV and ASTM D638 testing is performed, the mean strength shall exceed 8,000 psi for the pipe to be qualified to meet ASME NM.3.3 requirements.

Table 1-1-1M Maximum Allowable Stress Values, *S*, for Thermoplastic Materials (Cont'd)**GENERAL NOTES:**

- (a) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (b) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).

NOTE: (1) Multiply MPa by 1 000 to obtain kPa.

CONSTRUCTION CODE NOTES (ASME NM.1):

- C01 Compounding ingredients may vary between material manufacturers for the same grade of CPVC or PVC. While these different ingredients do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.
- C02 Cross-linking method may vary between material manufacturers for the same grade of PEX. While these different methods do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.

DESIGN FACTOR NOTES (ASME NM.1):

- D01 The allowable stress values are based on the hydrostatic design basis (HDB) as determined in accordance with ASTM D2837 multiplied by a design factor (DF) of 0.40.
- D02 The allowable stress values are based on the hydrostatic design basis (HDB) as determined in accordance with ASTM D2837 multiplied by a design factor (DF) of 0.50.
- D03 The allowable stress values are based on the hydrostatic design basis (HDB) as determined in accordance with ASTM D2837 multiplied by a design factor (DF) of 1.0. These values are only to be used when the DF is incorporated in the construction code equations.
- D04 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.32.
- D05 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.40.
- D06 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.50.
- D07 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 0.63.
- D08 The allowable stress values are based on the hydrostatic design basis (HDB) as identified in PPI TR-4 multiplied by a design factor (DF) of 1.0. These values are only to be used when the DF is incorporated in the construction code equations.

MATERIAL NOTES:**M01 Material shall have a**

- (a) minimum impact resistance of 80.1 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2 482 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 100°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,000 psi at 82.2°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 500 psi at 82.2°C in accordance with ASTM D2837

M02 Material shall have a

- (a) minimum impact resistance of 80.1 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2 482 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 100°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,250 psi at 82.2°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 625 psi at 82.2°C in accordance with ASTM D2837

M03 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 2,500 psi at 23°C, 1,600 psi at 60°C, and 1,250 psi at 82.2°C in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,250 psi at 23°C, 800 psi at 60°C, and 625 psi at 82.2°C in accordance with ASTM D2837.

Table 1-1-1M Maximum Allowable Stress Values, S, for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

M04 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm $\pm$ 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min $\pm$ 10% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm $\times$ 12.7 mm $\times$ 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min $\pm$ 50% at 23°C $\pm$ 2°C and 50% $\pm$ 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 3,150 psi at 23°C and 1,600 psi at 82.2°C in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837.

M05 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer.

M06 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M07 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 630 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M08 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, or colored with UV stabilizer.

M09 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 100 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M10 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 100 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M11 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M12 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M13 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
- (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4

M14 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603.

M15 Material shall have a

- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638

Table 1-1-1M Maximum Allowable Stress Values, *S*, for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,000 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837
- M16** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,500 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,250 psi at 23°C in accordance with ASTM D2837
- M17** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 3,200 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,600 psi at 23°C in accordance with ASTM D2837
- M18** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C in accordance with ASTM D2837
- M19** Material shall have a
- (a) minimum impact resistance of 34.7 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2758 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 70°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C in accordance with ASTM D2837
- M20** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 7,100 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 3,550 psi at 23°C in accordance with ASTM D2837
- M21** Allowable stress values apply to the unoriented directions only.
- M22** Allowable stress values apply to the oriented direction only.
- M23** Material shall have a
- (a) classification of Type I in accordance with ASME SD-3222
 - (b) minimum impact resistance of 80.0 J/m of notch at 23°C in accordance with ASTM D256
 - (c) minimum flexural modulus of 1.38 GPa at 23°C in accordance with ASTM D790, using Method I
 - (d) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 51 mm/min at 23°C
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,250 psi at 93.3°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 625 psi at 93.3°C in accordance with ASTM D2837
- M24** Material shall have a
- (a) classification of Type II in accordance with ASME SD-3222
 - (b) minimum flexural modulus of 1.38 GPa at 23°C in accordance with ASTM D790, using Method I
 - (c) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 51 mm/min at 23°C
 - (d) hydrostatic design basis (HDB) of 5,000 psi at 23°C and 1,250 psi at 120°C in accordance with ASTM D2837
 - (e) hydrostatic design stress (HDS) of 2,500 psi at 23°C and 625 psi at 120°C in accordance with ASTM D2837
- M25** The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.
- M26** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer. The degree of cross-linking for PEX pipe material shall be within the range from 65% to 89%, inclusive.
- (a) PEX cross-linked using peroxides shall have a minimum degree of cross-linking of 70%.
 - (b) PEX cross-linked using silane compounds shall have a minimum degree of cross-linking of 65%.
 - (c) PEX cross-linked using electron beam compounds shall have a minimum degree of cross-linking of 65%.
- M27** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 630 psi at 93.3°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 625 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M28** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.

Table 1-1-1M Maximum Allowable Stress Values, *S*, for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (b) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 (c) hydrostatic design stress (HDS) of 625 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M29** Material shall have a
 (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 (b) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 630 psi at 93.3°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 (c) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M30** Material shall have a
 (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 (b) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 (c) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M31** Material shall have a
 (a) classification of Group 4, Class 2, and Grade 3 in accordance with ASTM D6779.
 (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C and 50% ± 5% relative humidity.
 (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
 (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
 (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
 (f) hydrostatic design basis (HDB) of 3,150 psi at 23°C and 1,600 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 (g) hydrostatic design stress (HDS) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

Table 1-1-2M Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)

GENERAL NOTES:

- (a) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (b) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).

NOTE: (1) Multiply MPa by 1000 to obtain kPa.

CONSTRUCTION CODE NOTES (ASME NM.1):

- C01 Compounding ingredients may vary between material manufacturers for the same grade of CPVC or PVC. While these different ingredients do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.
- C02 Cross-linking method may vary between material manufacturers for the same grade of PEX. While these different methods do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.

MATERIAL NOTES:

M01 Material shall have a

- (a) minimum impact resistance of 80.1 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2482 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 100°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,000 psi at 82.2°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 500 psi at 82.2°C in accordance with ASTM D2837

M02 Material shall have a

- (a) minimum impact resistance of 80.1 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2482 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 100°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,250 psi at 82.2°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 625 psi at 82.2°C in accordance with ASTM D2837

M03 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 2,500 psi at 23°C, 1,600 psi at 60°C, and 1,250 psi at 82.2°C in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,250 psi at 23°C, 800 psi at 60°C, and 625 psi at 82.2°C in accordance with ASTM D2837.

M04 Material shall have a

- (a) classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- (d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- (e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- (f) hydrostatic design basis (HDB) of 3,150 psi at 23°C and 1,600 psi at 82.2°C in accordance with ASTM D2837.
- (g) hydrostatic design stress (HDS) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837.

M05 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer.

M06 Material shall have a

- (a) thermal stability of over 220°C in accordance with ASTM D3350
- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
- (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
- (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air

Table 1-1-2M Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (e) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) a hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M07** Material shall have a
 (a) thermal stability of over 220°C in accordance with ASTM D3350
 (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 (e) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 630 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M08** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, or colored with UV stabilizer.
- M09** Material shall have a
 (a) thermal stability of over 220°C in accordance with ASTM D3350
 (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 (d) slow crack growth resistance of over 100 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M10** Material shall have a
 (a) thermal stability of over 200°F in accordance with ASTM D3350
 (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 (d) slow crack growth resistance of over 100 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M11** Material shall have a
 (a) thermal stability of over 220°C in accordance with ASTM D3350
 (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M12** Material shall have a
 (a) thermal stability of over 220°C in accordance with ASTM D3350
 (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M13** Material shall have a
 (a) thermal stability of over 220°C in accordance with ASTM D3350
 (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M14** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603.
- M15** Material shall have a
 (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 (e) hydrostatic design basis (HDB) of 2,000 psi at 23°C in accordance with ASTM D2837
 (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837
- M16** Material shall have a
 (a) minimum impact resistance of 226.9 J/m of notch at 23°C in accordance with ASTM D256
 (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 (e) hydrostatic design basis (HDB) of 2,500 psi at 23°C in accordance with ASTM D2837
 (f) hydrostatic design stress (HDS) of 1,250 psi at 23°C in accordance with ASTM D2837
- M17** Material shall have a
 (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 (e) hydrostatic design basis (HDB) of 3,200 psi at 23°C in accordance with ASTM D2837
 (f) hydrostatic design stress (HDS) of 1,600 psi at 23°C in accordance with ASTM D2837

Table 1-1-2M Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)

MATERIAL NOTES: (Cont'd)

M18 Material shall have a

- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C in accordance with ASTM D2837

M19 Material shall have a

- (a) minimum impact resistance of 34.7 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2758 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 70°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C in accordance with ASTM D2837

M20 Material shall have a

- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
- (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
- (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- (e) hydrostatic design basis (HDB) of 7,100 psi at 23°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 3,550 psi at 23°C in accordance with ASTM D2837

M21 Allowable stress values apply to the unoriented directions only.

M22 Allowable stress values apply to the oriented direction only.

M23 Material shall have a

- (a) classification of Type I in accordance with ASME SD-3222
- (b) minimum impact resistance of 80.0 J/m of notch at 23°C in accordance with ASTM D256
- (c) minimum flexural modulus of 1.38 GPa at 23°C in accordance with ASTM D790, using Method I
- (d) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 51 mm/min at 23°C
- (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,250 psi at 93.3°C in accordance with ASTM D2837
- (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 625 psi at 93.3°C in accordance with ASTM D2837

M24 Material shall have a

- (a) classification of Type II in accordance with ASME SD-3222
- (b) minimum flexural modulus of 1.38 GPa at 23°C in accordance with ASTM D790, using Method I
- (c) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 51 mm/min at 23°C
- (d) hydrostatic design basis (HDB) of 5,000 psi at 23°C and 1,250 psi at 120°C in accordance with ASTM D2837
- (e) hydrostatic design stress (HDS) of 2,500 psi at 23°C and 625 psi at 120°C in accordance with ASTM D2837

M25 The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.

M26 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer. The degree of cross-linking for PEX pipe material shall be within the range from 65% to 89%, inclusive.

- (a) PEX cross-linked using peroxides shall have a minimum degree of cross-linking of 70%.
- (b) PEX cross-linked using silane compounds shall have a minimum degree of cross-linking of 65%.
- (c) PEX cross-linked using electron beam compounds shall have a minimum degree of cross-linking of 65%.

M27 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 630 psi at 93.3°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 625 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M28 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 625 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M29 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 630 psi at 93.3°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M30 Material shall have a

- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
- (b) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- (c) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

M31 Material shall have a

- (a) classification of Group 4, Class 2, and Grade 3 in accordance with ASTM D6779.
- (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C and 50% ± 5% relative humidity.
- (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.

Table 1-1-2M Maximum Allowable Compression Stress Values, S_{comp} , for Thermoplastic Materials (Cont'd)

MATERIAL NOTES: (Cont'd)

(d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.

(e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.

(f) hydrostatic design basis (HDB) of 3,150 psi at 23°C and 1,600 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

(g) hydrostatic design stress (HDS) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

Table 1-1-3M Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)

GENERAL NOTES:

- (a) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (b) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).

NOTE: (1) Multiply MPa by 1 000 to obtain kPa.

CONSTRUCTION CODE NOTES (ASME NM.1):

- C01 Compounding ingredients may vary between material manufacturers for the same grade of CPVC or PVC. While these different ingredients do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.
- C02 Cross-linking method may vary between material manufacturers for the same grade of PEX. While these different methods do not impact the allowable stress values provided in this Table, they can influence the acceptability of the various joining methods allowed by ASME NM.1. In addition to the material and joining requirements set forth in ASME NM.1, the joining method to be used shall be approved by the piping component manufacturer.

DESIGN FACTOR NOTE (ASME NM.1):

- D01 Allowable stress range values are based on a design factor (DF) of 0.50.

MATERIAL NOTES:

M01 Material shall have a

- minimum impact resistance of 80.1 J/m of notch at 23°C in accordance with ASTM D256
- minimum modulus of elasticity in tension of 2 482 MPa at 23°C in accordance with ASTM D638
- minimum deflection temperature under load of 100°C at a load of 1.82 MPa in accordance with ASTM D648
- average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,000 psi at 82.2°C in accordance with ASTM D2837
- hydrostatic design stress (HDS) of 2,000 psi at 23°C and 500 psi at 82.2°C in accordance with ASTM D2837

M02 Material shall have a

- minimum impact resistance of 80.1 J/m of notch at 23°C in accordance with ASTM D256
- minimum modulus of elasticity in tension of 2 482 MPa at 23°C in accordance with ASTM D638
- minimum deflection temperature under load of 100°C at a load of 1.82 MPa in accordance with ASTM D648
- average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
- hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,250 psi at 82.2°C in accordance with ASTM D2837
- hydrostatic design stress (HDS) of 2,000 psi at 23°C and 625 psi at 82.2°C in accordance with ASTM D2837

M03 Material shall have a

- classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- hydrostatic design basis (HDB) of 2,500 psi at 23°C, 1,600 psi at 60°C, and 1,250 psi at 82.2°C in accordance with ASTM D2837.
- hydrostatic design stress (HDS) of 1,250 psi at 23°C, 800 psi at 60°C, and 625 psi at 82.2°C in accordance with ASTM D2837.

M04 Material shall have a

- classification of Group 3, Class 2, and Grade 3 in accordance with ASTM D4066.
- minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity.
- minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.
- minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.
- minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.
- hydrostatic design basis (HDB) of 3,150 psi at 23°C and 1,600 psi at 82.2°C in accordance with ASTM D2837.
- hydrostatic design stress (HDS) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837.

M05 Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer.

M06 Material shall have a

- thermal stability of over 220°C in accordance with ASTM D3350

Table 1-1-3M Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M07** Material shall have a
- (a) thermal stability of over 220°C in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 630 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M08** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, or colored with UV stabilizer.
- M09** Material shall have a
- (a) thermal stability of over 220°C in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 100 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M10** Material shall have a
- (a) thermal stability of over 220°C in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 100 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M11** Material shall have a
- (a) thermal stability of over 220°C in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M12** Material shall have a
- (a) thermal stability of over 220°C in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 1,000 psi at 60°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M13** Material shall have a
- (a) thermal stability of over 220°C in accordance with ASTM D3350
 - (b) maximum brittleness temperature of -60°C in accordance with ASTM D746
 - (c) minimum tensile elongation at break of 400% in accordance with ASTM D638, using a Type IV tensile bar at 50 mm/min at 23°C
 - (d) slow crack growth resistance of over 500 h in accordance with ASTM F1473 at 2.4 MPa and 80°C in air
 - (e) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4
- M14** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603.
- M15** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,000 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,000 psi at 23°C in accordance with ASTM D2837
- M16** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 2,500 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,250 psi at 23°C in accordance with ASTM D2837
- M17** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648

Table 1-1-3M Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)**MATERIAL NOTES: (Cont'd)**

- (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 3,200 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 1,600 psi at 23°C in accordance with ASTM D2837
- M18** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C in accordance with ASTM D2837
- M19** Material shall have a
- (a) minimum impact resistance of 34.7 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2758 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 70°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C in accordance with ASTM D2837
- M20** Material shall have a
- (a) minimum impact resistance of 266.9 J/m of notch at 23°C in accordance with ASTM D256
 - (b) minimum modulus of elasticity in tension of 2206 MPa at 23°C in accordance with ASTM D638
 - (c) minimum deflection temperature under load of 60°C at a load of 1.82 MPa in accordance with ASTM D648
 - (d) average extent of burning of under 25 mm and an average time of burning of under 10 s in accordance with ASTM D635
 - (e) hydrostatic design basis (HDB) of 7,100 psi at 23°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 3,550 psi at 23°C in accordance with ASTM D2837
- M21** Allowable stress values apply to both the oriented and unoriented directions.
- M22** Material shall have a
- (a) classification of Type I in accordance with ASME SD-3222
 - (b) minimum impact resistance of 80.0 J/m of notch at 23°C in accordance with ASTM D256
 - (c) minimum flexural modulus of 1.38 GPa at 23°C in accordance with ASTM D790, using Method I
 - (d) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 51 mm/min at 23°C
 - (e) hydrostatic design basis (HDB) of 4,000 psi at 23°C and 1,250 psi at 93.3°C in accordance with ASTM D2837
 - (f) hydrostatic design stress (HDS) of 2,000 psi at 23°C and 625 psi at 93.3°C in accordance with ASTM D2837
- M23** Material shall have a
- (a) classification of Type II in accordance with ASME SD-3222
 - (b) minimum flexural modulus of 1.38 GPa at 23°C in accordance with ASTM D790, using Method I
 - (c) minimum tensile elongation at break of 10% in accordance with ASTM D638, using a Type I tensile bar at 51 mm/min at 23°C
 - (d) hydrostatic design basis (HDB) of 5,000 psi at 23°C and 1,250 psi at 120°C in accordance with ASTM D2837
 - (e) hydrostatic design stress (HDS) of 2,500 psi at 23°C and 625 psi at 120°C in accordance with ASTM D2837
- M24** The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.
- M25** Material shall have a carbon black percentage of 2% to 3% in accordance with ASTM D4218 or ASTM D1603, natural with UV stabilizer, or colored with UV stabilizer. The degree of cross-linking for PEX pipe material shall be within the range from 65% to 89%, inclusive.
- (a) PEX cross-linked using peroxides shall have a minimum degree of cross-linking of 70%.
 - (b) PEX cross-linked using silane compounds shall have a minimum degree of cross-linking of 65%.
 - (c) PEX cross-linked using electron beam compounds shall have a minimum degree of cross-linking of 65%.
- M26** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 630 psi at 93.3°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 625 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M27** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,250 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 625 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M28** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 630 psi at 93.3°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M29** Material shall have a
- (a) minimum elongation at break of 200% measured in accordance with ISO 6259-1 and ISO 6259-3. Test temperature shall be 23°C ± 2°C.
 - (b) hydrostatic design basis (HDB) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
 - (c) hydrostatic design stress (HDS) of 800 psi at 23°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.
- M30** Material shall have a
- (a) classification of Group 4, Class 2, and Grade 3 in accordance with ASTM D6779.
 - (b) minimum elongation at break of 200% in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C and 50% ± 5% relative humidity.
 - (c) minimum flexural modulus of 900 MPa in accordance with ASTM D790, Procedure A using a 3.2 mm × 12.7 mm × 127 mm test specimen. The testing shall be performed with a crosshead speed of 1.3 mm/min ± 50% at 23°C ± 2°C and 50% ± 5% relative humidity.

Table 1-1-3M Maximum Allowable Secondary Stress Range Values, S_A , for Thermoplastic Materials (Cont'd)

MATERIAL NOTES: (Cont'd)

(d) minimum izod impact resistance of 55 J/m in accordance with ASTM D256, using a test specimen with a 12.7-mm depth, a 3.17-mm width, and a notch radius of 0.25 mm.

(e) minimum deflection temperature of 40°C at 1.82 MPa in accordance with ASTM D648, using an unannealed test specimen 3.17 mm in width.

(f) hydrostatic design basis (HDB) of 3,150 psi at 23°C and 1,600 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

(g) hydrostatic design stress (HDS) of 1,600 psi at 23°C and 800 psi at 82.2°C in accordance with ASTM D2837, PPI TR-3, and PPI TR-4.

Table 1-1-YM Yield Strength Values, S_y , for Thermoplastic Materials (Cont'd)**GENERAL NOTES:**

- (a) The tabulated values of yield strength are those that the Committee believes are suitable for use in design calculations. At temperatures above room temperature, the yield strength values correspond to the yield strength trend curve adjusted to the minimum specified room-temperature yield strength. The yield strength values do not correspond exactly to "minimum" or "average" as these terms are applied to a statistical treatment of a homogeneous set of data. Neither the ASME material specifications nor the rules of ASME NM.1 require elevated temperature testing for yield strengths of production material for use in Code components. It is not intended that results of such tests, if performed, be compared with these tabulated yield strength values for ASME Code acceptance/rejection purposes for materials. If some elevated temperature test results on production material appear lower than the tabulated values by a large amount (more than the typical variability of material and suggesting the possibility of some error), further investigation by retest or other means should be considered.
- (b) Notes limiting applications of these materials appear in [Tables 1-1-1M, 1-1-2M, and 1-1-3M](#).
- (c) The stress values in this Table may be interpolated to determine values for intermediate temperatures. The values at intermediate temperatures shall be rounded to the same number of decimal places as the value at the higher temperature between which values are being interpolated. The rounding rule is: when the next digit beyond the last place to be retained is less than 5, retain unchanged the digit in the last place retained; when the next digit beyond the last place to be retained is 5 or greater, increase by 1 the digit in the last place retained.
- (d) The following abbreviations are used: CPVC, chlorinated poly(vinyl chloride); PEX, cross-linked polyethylene; PVC, poly(vinyl chloride); and PVDF, poly(vinylidene fluoride).
- (e) Chlorinated poly(vinyl chloride), polyamide, polyethylene, poly(vinyl chloride), and poly(vinylidene fluoride) are viscoelastic materials. The stress values in this Table are based on short-duration loads and are not appropriate for use as design stresses for long-term sustained loads.

NOTE: (1) Multiply MPa by 1000 to obtain kPa.

MATERIAL NOTES:

- M01 The stress values for chlorinated poly(vinyl chloride) and poly(vinyl chloride) in this Table are based on tensile testing in accordance with ASTM D638 using a Type I tensile bar at 5.1 mm/min at 23°C. At other strain rates, other values may apply.
- M02 The stress values for polyamide in this Table are based on tensile testing in accordance with ASTM D638, using a 3.2 mm ± 0.4 mm thick test specimen. The speed of testing shall be 50 mm/min ± 10% at 23°C ± 2°C and 50% ± 5% relative humidity. At other strain rates, other values may apply.
- M03 The stress values for polyethylene in this Table are based on tensile testing in accordance with ASTM D638 using a Type IV tensile bar at 51 mm/min at 23°C. At other strain rates, other values may apply.
- M04 These stress values for oriented poly(vinyl chloride) apply to the unoriented directions only.
- M05 These stress values for oriented poly(vinyl chloride) apply to the oriented direction only.
- M06 The stress values for poly(vinylidene fluoride) in this Table are based on tensile testing in accordance with ASTM D638 using a Type I tensile bar at 51 mm/min at 23°C. At other strain rates, other values may apply.
- M07 The first two digits (XX) of the PEX Type/Grade designation may be any designation permitted by ASTM F2788. They relate to end-use properties such as oxidation and UV resistance and do not affect strength.
- M08 The stress values for PEX in this Table are based in tensile testing in accordance with ASTM D638 using Type IV tensile bar at 2 in./min at 23°C. At other strain rates, other values may apply.
- M09 The stress values for Polyamide-12 in this Table are based in tensile testing at 23°C ± 2°C and 50% ± 5% relative humidity in accordance with ISO 527 on Type 1A specimens with a strain rate of 50 mm/min. At other strain rates, other values may apply.

In-plane shear, MPa	τ	D4255	2.90E+01	2.27E+01

Allowable Stress Envelope

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The maximum allowable design stress value shall be 12 410 kPa for flanges constructed of Type I laminates.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 mm, it is permissible to use the modulus values applicable to a total wall thickness of 20 mm and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The maximum allowable design stress value shall be 20 690 kPa for flanges constructed of Type II laminates.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 mm, it is permissible to use the modulus values applicable to a total wall thickness of 20 mm and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.

Allowable Stress Envelope

GENERAL NOTES:

- The values in this table may be interpolated to determine values for intermediate temperatures and thicknesses.
- Refer to ASME NM.2, Table 3-3.1-1 for limitations on service based on temperature.
- The Type III laminate values are based on 60% to 65% glass content; slight variations on thermal expansion can be expected if the glass content of the laminate is greater than 65%.

NOTES:

- Elastic properties apply to total wall, not just to structural wall. This is to ensure that the loads on the piping, the supports, and the connected equipment, as calculated in the pipe stress analysis, are not understated.
- For modulus values of the structural wall only, or for pipe for which the liner thickness is 0.0 mm, it is permissible to use the modulus values applicable to a total wall thickness of 20 mm and over.
- Elastic properties may also be determined in accordance with ASME NM.2, Mandatory Appendix II.
- Allowable and ultimate stress values apply to the structural wall only, not the total wall thickness.
